SUMMARY

Final-year Computer Engineering student skilled in MERN Stack development and Machine Learning, with experience building AI-powered and full-stack applications. Passionate about solving real-world problems through technology and creating impactful software solutions. Seeking internship opportunities to contribute, learn, and grow as a software engineer.

TECHNICAL SKILLS

Frontend : React.js, HTML5, CSS3, Tailwind CSS	Machine Learning : Scikit-learn , Pandas , Numpy , Tensorflow
Backend : Node.js, Express.js, Spring Boot, REST APIs, JWT Authentication	Databases : MongoDB, MySQL, SupaBase
Languages : Java, JavaScript, Python, C	Tools & Concepts : GitHub, Postman, Render, Vercel, DSA, OOP, DBMS

PROJECTS

E-Voting System Using Face Authentication

[GITHUB](#) [LIVE](#)

- Engineered a secured E-Voting platform with Admin and User authentication, integrating face verification and email-based token authentication to ensure safe and verified voting access.
- Built an admin dashboard to manage election campaigns, add/delete candidates and voters, and monitor real-time voting statistics with responsive React interfaces and secure backend APIs.

Dev Mentor – AI

[GITHUB](#) [LIVE](#)

- Build an DevMentor AI, an intelligent career development platform that leverages AI APIs to analyze resumes, assess GitHub profiles, generate learning roadmaps, and provide personalized project recommendations.
- Developed scalable frontend and backend modules using React.js, Node.js, Express.js, MongoDB, and REST APIs, enabling AI-powered mentoring, mock interviews, and career-focused insights.

Workload – Burnout

[GITHUB](#) [LIVE](#)

- Developed an AI-powered burnout prediction system using Machine Learning algorithms to analyze employee workload and predict burnout risk through an interactive and responsive dashboard.
- Implemented data preprocessing, prediction models, and real-time result visualization using Python, Flask, and modern frontend technologies for intelligent workforce analysis.

Experience

Mern Stack Intern – Sapphire PVT

September 2025 – January 2026

- Developed and deployed **ToggleNest**, a full-stack MERN application featuring secure authentication, responsive user interfaces, and efficient data management.
- Worked with **React.js, Node.js, Express.js, MongoDB, REST APIs, and JWT Authentication** to build and integrate frontend and backend functionalities.
- Collaborated in a team of four developers, contributing to assigned tasks, supporting teammates when needed, and participating in debugging, testing, and feature implementation.

Research Intern – TMG

June 2024 – July 2024

- Conducted research on new technical topics assigned weekly, preparing well-structured research papers through detailed study and analysis.
- Improved research, analytical thinking, technical documentation, and information-gathering skills by exploring diverse domains and evaluating credible sources.
- Submitted research work for review and evaluation by mentors and managers, incorporating feedback to enhance the quality and accuracy of reports.

EDUCATION

Bachelor of Engineering in Computer Engineering

August 2023 – June 2027

Datta Meghe College of Engineering, Airoli — Mumbai University (CGPA = 8.25)

ACHIEVEMENTS & CERTIFICATE

- 3rd Place – CSI Mini Project Competition:** Developed a Language Translator web application supporting 100+ languages with Text-to-Speech functionality; secured 3rd place among participants across all branches and academic years for innovation and technical implementation.
- Gold Medalist – Archery (Mumbai University) :** Secured 1st rank at the university level and represented the university at state-level competitions. Consistently performed at district and state levels while actively participating in Cricket, Football, Table Tennis, Chess, Badminton, and Athletics.
- Sponsorship Coordinator – CSI Committee:** Collaborated with team members to connect with sponsors, coordinate event partnerships, and contribute to the successful organization and execution of technical events and activities.
